ECY 040-1-14 Rev. 8/91 F

Detach this scale at the performation, fold excess paper under or cut off excess by cutting along the scale line. This scale corresponds to the SECTION MAP above. You can read feet directly from this scale to outline property and locate points of diversion or withdrawal on the SECTION MAP. Enclose this map along with the application and \$10.00 examination fee.

Your water right application will be processed by the Regional Office of the Department of Ecology having jurisdiction in the area in which your water works are located. Please submit your completed application form, maps, sketches, and \$10.00 examination fee to the appropriate Regional Office.

Northwest Regional Office 3190 - 160th Avenue S.E. Bellevue, WA 98008-5452 Tel. (206) 649-7000

Southwest Regional Office 7272 Cleanwater Lane Olympia, Washington 98504-6811 Tel. (206) 586-6380 Central Regional Office 3601 West Washington Yakima, Washington 98903-1164 Tel. (509) 575-2800

Eastern Regional Office N. 4601 Monroe, Suite 100 Spokane, Washington 99205-1295 Tel. (509) 456-2926

The appropriate Regional Office will be happy to answer any further questions you may have.

THE APPLICATION FORM

An initial examination fee of \$10.00 must accompany each application. If additional examination fees are required, you will be notified. Care should be taken to answer all the questions that pertain to your circumstance. An incomplete application will likely be returned to you for completion and delay your water right.

APPLICATION FORM ITEMS NEEDING SPECIAL ATTENTION

Item No. 2 of the Application:

The specific use or uses to which the water is to be applied must be entered here. Examples of such uses are irrigation, heat and frost control, single and multiple domestic supply, stock water, power generation, mining, industrial, fish propagation, wildlife refuge, recreation, heat exchange, commercial, municipal, etc.

Next, estimate the maximum quantity of water you will need for your water use. Normally, surface water is figured in cubic feet per second and ground (well) water is figured in gallons per minute. However, you may use either unit and we will convert if necessary. One cubic foot per second is equal to 450 gallons per minute. As a general guideline, a single domestic supply, which includes up to 1/2 acre of lawn and garden irrigation, requires 0.01 to 0.02 cubic feet per second or five to ten gallons per minute. The average requirement per acre of irrigation is 0.02 cubic feet per second or ten gallons per minute. If you require assistance in completing this item of your application, please contact the appropriate regional office of the Department of Ecology.

Item No. 3A of the Application:

If your point of diversion or withdrawal is on platted property, please enter the lot and block numbers, the name of the plat or addition, and the related section, township and range. Please also attach an official (as recorded) copy of the plat on which is marked your point of diversion or withdrawal and the boundaries of the property on which the water is to be used. Finally, please send in any additional maps or drawings you may have which will help pinpoint your point of diversion or withdrawal and your place of water use.

Item No. 3B of the Application:

If your point of diversion or withdrawal is not on platted property, refer to a detailed map or sketch of the property or turn to the **SECTION MAP** provided in this package. Here you should sketch the boundaries of the property on which the water is to be used. Next, show by an "X" your point of diversion or withdrawal and indicate the north/south, east/west distances from the nearest section corner or propety corner—whichever is more convenient. Below the map, indicate traveling directions from the nearest town to the vicinity of your point of diversion or withdrawal. Be certain to send in this map and any others which may help pinpoint your point of diversion or withdrawal and your place of use.

Returning to the application form, please enter the distances from your point of diversion or withdrawal to the nearest section corner or property corner as you have already indicated on the **SECTION MAP** or other map. Finally, enter the smallest legal subdivision in which your point of diversion or withdrawal can be found (normally a quarter of a quarter section) and enter the corresponding section, township, range and county in their appropriate boxes.

Item No. 5 of the Application:

Attach two copies of the legal description of the property on which the water is to be used, taken either from a real estate contract, property deed or title insurance policy. If the property is large and water will not be applied to the entire piece, please highlight on the SECTION MAP, or other maps you have enclosed, those portions which will receive water. If you are unable to enclose copies of your legal description, please copy it carefully on the application or on a separate piece of paper and attach it to the application. Particular attention should be paid to insuring that the exact legal description of the property on which the water is to be used is submitted with the application. Errors in the legal description, such as omissions or transpositions, will result in a delay and/or an error in your water right.

Please submit your completed application form, maps or sketches, and \$10.00 examination fee to the appropriate regional office of the Department of Ecology (see reverse of center page).

DEPARTMENT OF ECOLOGY

APPLYING FOR A WATER RIGHT

General Information

The State Water Code of 1917 prescribes that all water is publicly owned and no public water may be appropriated (taken from its natural source and used) except as specified in the code.

The water code makes an exception to the otherwise mandatory procedure of obtaining a water right to use public water. This exception allows withdrawal of public water from a well for the following uses: stock watering, single or group domestic supply, irrigation of lawn and/or garden not greater than 1/2 acre, and industrial uses—PROVIDED, that the water used shall not exceed 5,000 gallons per day. This exception is principally used to provide single family dwellings with wells for their domestic needs without requiring a formal water right.

The following information is not intended to answer all the questions you may have in applying for a water right, but it should help with some of the more common problems people frequently encounter. If you need further help, contact the regional office of the Department of Ecology which serves your area. Regional office addresses are provided elsewhere in this package.

STEPS NECESSARY TO OBTAIN A WATER RIGHT

PLEASE READ CAREFULLY

- 1. The applicant applies for a permit to construct works for the diversion or withdrawal of water. The application must be accompanied by the minimum examination fee of \$10.00. This minimum examination fee covers the appropriation of up to five cubic feet per second or 2,250 gallons per minute. If an additional examination fee is required the applicant will be notified.
- The Department of Ecology reviews the application with respect to form and, if it is complete, processes the application. If the application is incomplete, it is returned to the applicant.
- 3. The Department of Ecology provides the applicant with a notice of intent to divert or withdraw water which the applicant is responsible for publishing in an appropriate newspaper(s).
- 4. The Department of Ecology examines the specifics of the application and reports its findings and conclusions. This action may require a field examination of the project site.
- 5. The report of findings and conclusions is forwarded to the applicant for his concurrence accompanied by a request for the permit filing fee. The amount of the fee is based on the use(s) of the water as authorized by the permit. The minimum filing fee is \$5.00. This minimum fee covers uses such as a single domestic supply or the irrigation of up to 12 acres. Other uses will cause the permit filing fee to exceed the minimum.
- 6. If the applicant concurs with the report of findings and conclusions and submits the statutory permit filing fee, the Department of Ecology will issue a permit granting authority to the applicant (now a permittee) to develop a water works and begin appropriating water. NOTE: A permit to appropriate public waters does not convey the right to trespass on lands of others for access to the water source. Rights of way or easements to such source must be obtained by the permittee.
- 7. The permittee develops his water works and applies the water to the authorized uses. During this period the permittee must submit progress reports as required by the Department of Ecology. Extensions may be granted when, for good reasons, the permittee is unable to comply with the construction schedule.
- 8. Upon completion of the works and application of the water to the uses allowed in the permit, the Department of Ecology issues the permittee a certificate of water right. The permittee pays the certificate recording fee of \$5.00 payable to the Department of Ecology plus a County Auditor's recording fee.
- 9. Please retain the above schedule for reference until a certificate is issued.
